

PACKAGING KITS

Our packaging kit can be made up of **one or more materials, and composed of different elements**. The kits are ideal for storage, grouping and transport of a wide variety of products, where packaging with **robust stacking load performance** is required.

In most cases the kit consists of a large, pallet-style box on a wooden pallet or base reinforced with honeycomb cardboard and with interior packaging to **secure, stack, separate and protect the products**.

Our team at Rotri takes care of manufacturing and building the kit and delivering it to you **pre-assembled and ready for use**. All you have to do is open it, position your product inside, close it and send it to its destination. **We assess each situation to create the optimal kit for your needs**, carrying out regular deliveries as requested.

Advantages

High level of stacking **strength**

Effective **protection**

Recyclable

Easy set-up

Good presence

Optimises use of space

Personalised assessment

Customization options

- Can be supplied preassembled or unassembled
