

## PALEFIX ANTISLIP

Organic, **anti-slip glue** with a high adhesion coefficient, which stabilises pallet loads (sacks, bags or boxes). Reduces and replaces stretchy films and anti-slip separators.

The chemical composition of Palefix adhesives consists of **natural and totally biodegradable products**, meaning that they do not impact the paper recycling process. The formula gives the adhesive tapes high horizontal tensile strength and practically no resistance in the vertical direction. Palletisation of loads is streamlined and reverse logistics are even easier. Palefix helps to reduce waste in load utilisation by making transportation secure.

### Advantages

**More sustainable** since it reduces or complete eliminates use of plastic stretch film

**Optimisation of costs**, materials and packaging times

**Ecological and sustainable** option: natural and biodegradable product

**Does not affect the recycling process** of boxes, bags and sacks

**Reduction of product damage** and accidents

**Easy palletisation and depalletisation**: high horizontal resistance and very little vertical resistance

**Trace-free**

**Stabilises the goods** on the palletising and transportation lines

Allows an **increase in the amount of products** per pallet

**Resistant** to low temperatures

**Shorter unloading time** thanks to the correct positioning of the pallet and the goods on top of it

**Eliminates the pressure of straps**, thus avoiding deformations in the material

**Improve the presentation** of the pallets and your product.

### Customization options

- Manual application
- Automatic application

### Weights and dimensions

- Packs for manual application
- Containers for automatic application

## More sustainable

Palefix adhesives contain **natural and totally biodegradable products** in their chemical composition, which allows them not to intervene in the paper recycling process.

## How does it work

Its formula acts in such a way that the varnish provides **high horizontal tensile resistance** and practically no resistance in the vertical direction. The palletizing of loads becomes **more agile** and the concern with reverse logistics is even less. Palefix helps reduce waste in the use of loads by **providing transport security**.

## Applicable sectors

Food,  
Agriculture

Graphic arts

Electronics

Extractive and  
Chemical industries

Pharmaceutical,  
Cosmetics and  
Fragrance industries

Transport,  
Logistics
